

PUDLO Warranties

PUDLO designs, manufactures and supplies an advanced range of waterproofing products.

PUDLO began as a waterproofing powder, used for the first time in Victorian London's famously robust sewer system.

140 years later and PUDLO is now world-renowned. It enjoys a foremost reputation and is trusted by the most respected

names in construction.

Our product range has broadened to include membranes, cavity drain systems and other integrated products which are used on some of the most famous buildings projects in the world, including the Royal Albert Hall and the Burj Khalifa in Dubai.

Because our technical teams are

certificated experts in their field – typically AMICT, CSSW and TechICT accredited - their waterproofing knowledge is routinely sought from the design stage.

Our qualified site support teams attend site throughout the PUDLO installation meaning we can offer the longest performance warranties in the industry.

We are now pleased to expand our performance warranty range to include membranes

What's new

PUDLO warranties are the most extensive in the construction industry today.

They include:

- 30-year performance and product warranty on PUDLO waterproof concrete when combined with a PUDLO membrane solution
- 20-year performance and product warranty on PUDLO waterproof concrete & integrated systems
- 10-year performance & product warranty on PUDLO fully bonded membranes with PUDLO site QA
- 20-year product warranty across the range as standard
- Contact PUDLO to discuss your warranty requirements

Warranty advantages

1. Oversight of the waterproofing installation by the PUDLO site team
2. Dedicated PUDLO site team means reassurance and peace of mind for your project
3. Reduces risk of costly remediation
4. Helps avoid project delays and ensures build integrity

Testimonials

“ FDL has worked with DB Group and PUDLO across many projects over the years and I'm always impressed with the end-to-end service they provide. The general standard of work is high, from their proficient technical drawings to site inspections, and their warranties reflect a commitment to a higher standard.

Jim O'Reilly, Planning & Technical Manager of Foundation Developments Ltd (FDL) & chartered civil engineer.

“ Working with PUDLO across a range of projects from private residential to large-scale commercial developments, we have always found them to be a proactive and reliable partner. At the design stage they are happy to engage with the design team to develop a waterproofing strategy and details that are the best for the project. During the construction phase, their support on site is invaluable in ensuring that the details are built to the standards required to achieve the designed performance.

Malcolm Archer, Director of Davies Maguire structural engineers.
